

GALVA-PASS RAPID FOLD-UP DOOR

Introduction

The Securi-Door Galva-Pass Rapid Fold- Up Door is designed for external applications exposed to considerable wind load. The sides of the guides are covered with a special aluminium extrusion to protect the canvas curtain from friction. The door is self supporting using strong galvanised steel side guides which makes installation easy as only simple bracing is required to fit the door to the building structure. A Safety Bottom Edge and double Polarised Photoelectric Cell is fitted as standard. Opening and closing speed is 1 m/second.

Canvas Curtain Features

The 900 g/m² canvas curtain is available in 9 standard colours and is fitted with horizontal reinforcement steel tubes, which gives resistance against wind load. The tubes are capped with rubber caps to prevent wear and reduce noise. The bottom is formed like a bag to ensure a good seal even when the ground is uneven. Two rows of transparent Vision Panels are included as standard.

Standard Curtain Colours		
(RAL Code is nearest available)		
White RAL 9010		Brown RAL 8017
Yellow RAL 1003		Blue RAL 5010
Red RAL 3002		Green RAL 6026
Orange RAL 2004		Grey RAL 7038

Applications

Galva-Pass is suited to all industrial environments, including motor vehicle dealers, hangers, car wash tunnels, etc.

Dimensions

Its design allows the Galva-Pass to be fitted to the face of the opening or within. The maximum recommended opening size is 6000mm wide x 6000mm high.

Motor and Control Options

The motor is a 3 phase 'SafeDrive' unit with 24v controls and has 60% Duty Cycle. It is linked to the door through an elastic coupling thus reducing vibration thereby increasing the motor life. Standard protection is IP55. Manual override is via the use of a hand crank handle. The doors are operated by push button station as standard or photocell, induction loop detector, radar, radio control, or pull cord (see below) at an additional cost. Electrical interlocking of two or more doors can also be provided.
